**Numerical Modeling of Embankment on Soft
Marine Clay Stabilized by Vertical Drains**

by

Sam Wa Ngai

Master Degree of Science in Civil Engineering

2003

**Faculty of Science and Technology
University of Macau**

TABLE OF CONTENTS

List of Figures.....	v
List of Tables.....	viii
Chapter 1: Introduction.....	1
Chapter 2: Review of Literature	3
2.1 Consolidation and Consolidation Settlement	3
2.1.1 General.....	3
2.1.2 Components of Settlement.....	4
2.1.3 Normally Consolidated and Over Consolidated Soil	4
2.1.4 Consolidation Test.....	5
2.1.5 Estimation of One Dimensional Consolidation Settlement.....	6
2.2 Effects of Rate and Time on the Behavior of Clays	8
2.2.1 Principle of One Dimensional Consolidation.....	8
2.2.2 Hypothesis in Terzaghi's Theory	11
2.2.3 Limitations of Terzaghi's Theory.....	12
2.2.4 Relationship between Degree of Consolidation and Time Factor	13
2.2.5 Secondary Compression	14
2.3 Prediction of Settlement by Empirical Methods.....	15
2.3.1 Asaoka Method.....	15
2.3.2 Rectangular Hyperbola Method.....	16
2.3.3 Macau Experiences.....	19
2.3.3.1 Weibull Equations	19
2.3.3.2 Correlation Method.....	21
2.4 Other Influencing Factors.....	22
2.4.1 Behavior of Hydraulic Sand Fill.....	22
2.4.2 Effect of Short Duration of Load Increment	23
2.4.3 Unreinforced and Reinforced Embankment on Soft Clay.....	24
Chapter 3: Theoretical Background.....	26
3.1 Vertical Drains.....	26

3.1.1 History of Vertical Drains	26
3.1.2 Consolidation Theory for Ideal Well.....	26
3.1.3 Smear Effect	28
3.1.4 Well Resistance	30
3.1.5 Coupling Smear Effect and Well Resistance.....	32
3.2 Numerical Modeling in Plane Strain Condition	33
3.3 Constitutive Models.....	39
3.3.1 Elastic and Plastic Models.....	39
3.3.2 Critical State Model.....	41
3.3.2.1 Introduction	41
3.3.2.2 Critical State Parameters	41
3.3.2.3 Volume-Pressure Relation.....	42
3.3.2.4 Critical State Line.....	42
3.3.2.5 Cam-clay and Modified Cam-clay	44
Chapter 4: Field Investigation	47
4.1 Plan and Sections.....	47
4.2 Geological Profiles	48
4.3 Parameters of Soil.....	54
4.4 Actual Site Measurements during Construction.....	57
4.5 Soil Parameters used for Numerical Modeling.....	58
Chapter 5: Computer Modeling and Comparison of Results	60
5.1 Introduction	60
5.1.1 CRISP	60
5.1.2 FLAC	61
5.2 Modeling Methodology	62
5.2.1 Equivalent Permeability Method	62
5.2.1.1 Introduction	62
5.2.1.2 Verification of the Equivalent Permeability Method	63
5.2.2 Procedure for Modeling Settlement of Embankment	69
5.2.3 Criteria of Comparison	69
5.3 Modeling using CRISP	70

5.3.1 General.....	70
5.3.2 Comparison of CRISP Results and Actual Site Measurements	73
5.4 Modeling using FLAC.....	87
5.4.1 General.....	87
5.4.2 Comparison of FLAC Results and Actual Site Measurements	88
5.5 Comparison of FLAC and CRISP Analyses.....	102
5.5.1 Advantages and Disadvantages of using CRISP and FLAC for Estimating Settlement of Embankments.....	102
5.5.2 Comparison of Results between CRISP and FLAC Analyses	103
Chapter 6: Conclusions.....	104
Chapter 7: Suggestions for Future Research	106
References	107
APPENDIX A: Site Data – VU3.3 Road between Roundabout NU4 and Roundabout NU2.....	111
APPENDIX B: Soil Parameters Used for Analysis.....	130
B.1 Soil Parameters Used for FLAC	130
B.2 Soil Parameters Used for CRISP	130
APPENDIX C: FLAC Scripts for Estimating Settlement of Embankment.....	137
C.1 Development of FLAC Scripts	137
C.1.1 Main Script (VU33Main.dat).....	137
C.1.2 Script for Soil Parameters (VU33Soil.fis)	138
C.1.3 Script for Filling Parameters (VU33Fill.fis).....	138
C.1.4 Other Procedures (VU33Proc.fis).....	138
C.2 Flow Charts.....	139
C.3 Input Variables.....	141
C.3.1 VU33Fill.FIS	141
C.3.2 VU33Soil.FIS.....	141
C.3.3 VU33Proc.FIS.....	142
C.3.4 VU33Main.DAT	142
C.4 Scripts	143
C.4.1 VU33Fill.FIS	143

C.4.2 VU33Soil.FIS.....	147
C.4.3 VU33Proc.FIS.....	149
C.4.4 VU33Main.Dat.....	152
