Axial Bearing Capacity Prediction of Driven Piles using Artificial Neural Network

by

Che Wai Fong

Master of Science in Civil Engineering

2003

Faculty of Science and Technology
University of Macau

TABLE OF CONTENTS

List of figures iii
List of TABLES ix
LIST of Abbreviations xi
Chapter 1: INTRODUCTION 1
Chapter 2: LITERATURE REVIEW 3
2.1 Prediction of bearing capacity for driven piles 3
2.2 Wave equation method 5
2.2.1 One dimensional wave theory 6
2.2.2 Boundary conditions 9
2.2.3 Shaft resistance of pile 11
2.2.4 Pile discontinutities 13
2.2.5 Total soil resistance – Principle of CASE method 14
2.2.6 Soil resistance estimated by direct methods 20
2.2.6.1 CASE method and Maximum CASE method 22
2.2.6.2 Impedance method 24
2.2.6.3 TNO method and Maximum TNO method 25
2.2.7 Soil resistance estimated by indirect method - TNOWAVE 27
2.2.7.1 Numerical Model for TNOWAVE 28
2.2.7.2 Pile-Soil Interaction in TNOWAVE 31
2.3 ANN and back-propagation alogrithm 39
2.3.1 Three layer feedward nerual netwrok 39
2.3.2 Taxonomy of neural network 40
2.3.2.1 Learning phase 40
2.3.2.2 Retrieving phase 41
2.3.3 Error functions and optimization 41
2.3.4 Back-propagation algorithm 42
2.3.5 Levenberg-Marquardt algorithm for training the network 47
2.3.6 Improving generalization 49

Chapter 3: ANN MODELING APPROACHES AND RESULTS 52
3.1 Database for the neural network 52
3.2 Details of artificial neural network 55
3.2.1 Network structure 55
3.2.2 Number of neurons 56
3.3 ANN model propsoed by Teh (1997) 57
3.3.1 Normalization of input and output data 58
3.3.2 Network Details 60
3.3.3 Training and validating of the network 60
3.3.4 Comparison of the prediction 65
3.4 ANN model propsoed by Chow (1995) 68
3.3.1 Non-dimensionalization of the input and output data 69
3.3.1 Normalization of input and output data 71
3.4.2 Network Details 71
3.4.3 Training and validating of the network 72
3.4.4 Comparison of the prediction 72
3.4.5 Study of the influence of parameter $\overline{L}$ used in Chow's model 78
3.4.6 Influence of pile head displacement 85
3.5 Reduced Chow's model 91
3.5.1 Training and validating the network 92
3.5.2 Relative Importance of the input variable 101
3.5.3 Parametric study of the input variables 102
3.6 Reduced Chow's Model adopting both pile length and displacement 106
3.7 Prediction of total resistance by sum up shaft resistance and toe resistance predicted by ANN 113
Chapter 4: CONCLUSIONS AND SUGGESTIONS 116
4.1 Conclusions 116
4.2 Suggestion for further research 118
BIBLIOGRAPHY 119
APPENDIX A: DATABASE 127
APPENDIX B: ANN PREDICTION 130
