Inter - turn Faults of Three - phase Induction Machines

by

Cheang Tak Son

A Thesis submitted in partial fulfillment
of the requirements of the Degree of

MASTER OF SCIENCE

in

ELECTRICAL AND ELECTRONIC ENGINEERING

Faculty of Science and Technology

UNIVERSITY OF MACAU

January 1997

Table Of Contents

1. Introduction

1.1. Background Of The Internal Faults Of The Windings Of The Alternative Current (AC) Machines (Pg.1)
- 1.1.1 Historical Information (Pg.1)
- 1.1.2 Commercial Markets On The Motor Protections (Pg.2)
- 1.1.3 Practical Considerations (Pg.3)

1.2 The Main Problems Existing For The Investigation Of Asymmetrical Internal Faults Of AC Machines In The World (Pg.4)

1.3 Main Tasks For This Research Works (Pg.6)

2. Concepts And Theorems Used

2.1 Construction Of An Induction Machine (Pg.7)

2.2 The Equivalent Circuit (Circuit Model) Of The Induction Machine (Pg.8)

2.3 Parameters Calculation From No - Load And Blocked - Rotor Test (Pg.10)
- 2.3.1 No - Load Test (Pg.10)
- 2.3.2 The Test With Rotor Drawn - Out For Stator Resistance And Reactance (R_s And X_s) (Pg.11)
- 2.3.3 Blocked - Rotor Test (Pg.12)

2.4 The Generated Voltage Including Distribution Effects (Pg.13)

2.5 Revolving - Field Theory Of Single - Phase Induction Machines (Pg.14)

2.6 Bi - Directional Revolving - Magnetic - Field Theory Of Two Phase Machines (Pg.18)
- 2.6.1 Explanation Of Using This Theory To Develop The Required Parameters (Pg.18)

3. Fault Analysis

3.1 Inter - Turn Short - Circuit (Pg.24)
- 3.1.1 Development Of Physical Model (Pg.24)
- 3.1.2 Analysis Of The Inter - Turn Fault Based On The "Bi - Directional Revolving - Magnetic - Field Theory Of Two - Phase Machine", As Shown In Section 2.6 (Pg.28)

3.2 Inversely - Connected Fault (Pg.40)
- 3.2.1 Development Of Physical Model (Pg.40)
- 3.2.2 Analysis Of The Inversely - Connected Fault Based On The "Bi - Directional Revolving - Magnetic - Field Theory Of Two - Phase Machine", As Shown In Section 2.6 (Pg.43)

3.3 Comparison Between The Analysis Of Inter - Turn Fault (Part 1) And The Analysis Of Inversely - Connected Fault (Part 2) (Pg.51)

4 Programming Analysis

4.1 Inter - Turn Fault (Pg.54)
4.1.1 Introduction (Pg.54)
4.1.2 Variables' Definitions (Pg.54)
4.1.3 Subroutine Explanation (Pg.56)
4.1.4 Considerations Of Special Case (Pg.57)
4.1.5 Flowchart Of The Main Program (Pg.59)
4.1.6 Flowchart Of The Subroutine "SOLVEQ" (Pg.60)
4.2 Inversely - Connected Fault (Pg.61)
4.2.1 Introduction (Pg.61)
4.2.2 Variables' Definitions (Pg.61)
4.2.3 Subroutine Explanation (Pg.62)
4.2.4 Flowchart Of The Main Program (Pg.64)
4.2.5 Flowchart Of The Subroutine "SOLVEQ" (Pg.65)
4.3 Comparison Of The Checkup Results Between Section 4.1 And Section 4.2 (Pg.66)

5 Experiments Analysis

5.1 Measurement Of The Machine's Parameters Under Normal Situation (Pg.69)
5.1.1 Measurement Of The No - Load Test (Pg.69)
5.1.2 Measurement Of The Blocked - Rotor Test (Pg.69)
5.1.3 Measurement Of Drawing The Rotor Out (Pg.69)
5.1.4 Calculation Of The Machine's Parameters Under Normal Situation (Pg.69)
5.2 Measurement Of The Machine's Parameters Under Inverse Connection Of Phase B (Pg.71)
5.2.1 Measurement Of The Changed Stator Parameters After The Fault (Pg.71)
5.2.2 Calculation Of The Machine's Parameters Under Fault Condition (Pg.71)
5.3 Measurement Of The Phase Currents And Voltages Under Fault Conditions (Pg.72)
5.4 Comparison Between The Measurements Shown In Section 5.3 And The Possible Calculated Values From The Program (Pg.73)
5.5 Comments On The Comparison Of The Experiment Values With The Calculated Values (Pg.74)

6 Problems Found

6.1 Stator Effective Resistance And Leakage Reactance (Pg.75)
6.2 Positive And Negative Sequence Impedance (Pg.75)
6.3 Machine Structures (Pg.75)
6.3.1 Fractional Pitch (Pg.75)
6.3.2 Harmonics (Pg.76)
6.4 Measurement Errors (Pg.76)

7 Discussions
7.1 Effective Stator Resistance (Pg.77)
7.2 Stator Leakage Reactance (Pg.78)
7.2.1 Slot - Leakage Reactance (Pg.78)
7.2.2 Stator - Harmonic Leakage Reactance (Pg.79)
7.2.3 Stator - Winding - End Leakage Reactance (Pg.79)
7.3 Effective Rotor Resistance (Pg.80)
7.4 Rotor Leakage Reactance (Pg.80)
7.5 Effective Magnetizing Resistance And Reactance (Pg.81)
7.6 Harmonic Effect (Pg.81)
7.7 Losses Analysis (Pg.81)
7.7.1 Copper Losses (Pg.82)
7.7.2 Core Losses (Pg.82)
7.7.3 Stray Load Losses (Pg.83)
7.8 Analysis Of Experimental Errors (Pg.83)
7.9 Saturation Effect On The Machine's Parameters (Pg.84)
7.10 Ratios Of The Negative Sequence Parameters Or Zero Sequence Parameters To The Rated Values (Pg.84)

8 Conclusions (Pg.86)

Appendices
A - Insulants Of AC Machines (Pg.87)
B - Source Program Of "INTER - TURN FAULT" (Pg.90)
C - Test Results Of The Program "INTER - TURN FAULT" (Pg.100)
C.1 - Inputs (Pg.100)
C.2 - Outputs (Pg.101)
D - Source Program Of "INVERSELY - CONNECTED FAULT" (Pg.104)
E - Test Results Of The Program "INVERSELY - CONNECTED FAULT " (Pg.110)
E.1 - Inputs (Pg.110)
E.2 - Outputs (Pg.111)
F - Summary From IEEE Std. 242 - 1986 - Motor Protection (Pg.114)
F.1 - General (Pg.114)
F.2 - Items To Consider In Protection Of Motors (Pg.114)
F.3 - Types Of Protections (Pg.114)
G - Calculation Of Pitch Factor, Distribution Factor And Number Of Turns Of The Machine Under Checkup (Pg.119)

H - Photographs (Pg.121)

References (Pg.123)
