GIS Middleware Supporting Heterogeneous GIS Clients

by

Chao Pek Kei

Master of Science in Software Engineering

2005

Faculty of Science and Technology
University of Macau

TABLE OF CONTENTS

Chapter 1 Introduction 1

1.1 Motivation 1

1.2 Problems 2

1.3 Objectives 3

1.4 Approach 4

1.5 Contributions 5

1.6 Thesis Organization 6

Chapter 2 Literature Review 8

2.1 GIS Review 8

2.2 Trends in GIS Applications 10

2.3 Different GIS Models 11

2.3.1 Traditional GIS architecture 12

2.3.2 Web GIS architecture 12

2.3.3 Mobile GIS architecture 16

2.4 The Reason of GIS Middleware Construction 18

2.5 Successful System Supporting Multi-Platforms 19

2.5.1 Beside GIS area - MUSA architecture 19

2.5.2 Six tier client/server Web GIS architecture supporting desktop PCs and Mobile phone 20

2.6 Summary 22

Chapter 3 GIS Middleware Conceptual Model 23

3.1 Overall Description 23

3.2 Forms of GIS Data 24

3.3 Simplification of GIS Data 25

3.3.1 Generalization 26

3.3.2 Simplification of GIS Data 27

3.3.3 Algorithm of Line Simplification 29

3.4 High-Level Conceptual Model 31

Chapter 4 GIS Middleware System Analysis and Design 37

4.1 Use Case Diagram 37

4.1.1 Actors of GIS System 37

4.1.2 GIS System Use Case 38

4.2 GIS System Class Design 40

4.3 GIS Middleware Sequence Diagram 43

4.3.1 System Initialization 43

4.3.2 Online GIS Services 45

4.3.3 Offline Functionalities of GIS System....48
Chapter 5 Data Simplification....50
5.1 Justification of Simplifying the GIS Data....50
5.2 GIS Data Structure....51
5.2.1 Structure of Shapefile....52
5.2.2 Structure of Feature Collection....54
5.3 Polyline and Polygon Simplification Algorithm....54
5.3.1 Calculate the simplified proportion....55
5.3.2 Douglas-Peucker algorithm....56
5.3.3 Line Reduction....58
5.4 Scenario of Different Client Devices Connect to the GIS Middleware....59
5.5 Experimentation in Using Different Values of the Accepted Distance in the Simplification Formula....64
5.5.1 Using the proportion to calculate the tolerance distance of a point to a segment....64
5.5.2 Using different constants to calculate the accepted distance of a point to a segment....66
Chapter 6 Prototype of the GIS Middleware....70
6.1 Introduction....70
6.2 Connection Method of Heterogeneous Clients....70
6.2.1 Java RMI (Remote Method Invocation) architecture....71
6.2.2 GIS middleware connection model....72
6.3 Functions of the GIS Middleware....73
6.3.1 Load the Shape File....74
6.3.2 Zoom in & out the map....75
6.3.3 Panning the map....76
6.3.4 Reset the map....77
6.4 Scenarios of different client devices connect to the GIS middleware....77
6.5 Performance on the client devices....79
6.5.5 Reduction of data size....79
6.5.6 Reduction of processing time....80
6.5.7 Reduction of network transmission time....81
Chapter 7 Conclusion....82
7.1 Summaries of the Study and Outcome....82
7.2 Future Research Direction....83
7.2.1 Limitations of the achievement....84
7.2.2 Research to be continued....85
