The Statistical Foundations of Ratio Analysis: Theory and Hong Kong Evidence

By
Sam Chon

A dissertation submitted to the Faculty of Business Administration in partial fulfillment of the requirements for the degree of Master of Business Administration.

University of Macau, December 22, 1998

Contents

Preface iv

Acknowledgements vii

I Cross-Section Theory and Evidence 1

1 The Distribution of Financial Ratios: Theory 2

1.1 Literature Review . . . 3
1.2 Multiplicative vs Additive Data . . . 4
1.3 The Random Effect of Size . . . 6
1.4 The Distribution of Bounded Ratios . . . 7
1.5 Avoiding Constraints and Negative Cases . . . 9
1.6 Notes . . . 10

2 Evidence on Lognormality of Accounting Aggregates and Ratios 13

2.1 Methodology and Data Set . . . 13
2.2 Intra-Industry Results . . . 15
2.3 Cross-Industry Results . . . 15
2.4 Testing Other Transformations . . . 18
2.5 Comparing Bounded and Unbounded Ratios . . . 19
2.5.1 Bounded Ratios Are Near Symmetry . . . 19
2.5.2 Unbounded Ratios Are Broadly Lognormal . . . 20
2.6 Skewed Ratios and Non-Proportionality . . . 21
2.7 Concluding Comments . . . 23
2.8 Notes . . . 24

II Time-Series Theory and Evidence 25

3 Discrete-Time Stochastic Ratios 26
3.1 Stochastic Processes . . . 26
3.2 Martingales . . . 27
3.2.1 Mean-Reverting Processes . . . 28
3.2.2 Random Walk . . . 28
3.3 Weak Evidence on the Stochastic Characteristics of Financial Aggregates . . . 29
3.3.1 Economic Reasons for Expecting Martingale-Type Processes . . . 29
3.3.2 Prior Evidence . . . 30
3.3.3 Data . . . 30
3.4 Tests and Results . . . 31
3.4.1 Runs Test . . . 31
3.4.2 Serial Correlation . . . 35
3.5 Interpretation of Results . . . 36

4 Introduction to Stochastic Calculus and the Itô Lemma 37
4.1 The Continuous Model of a Random Walk – The Wiener Process . . . 37
4.2 The Generalization of Brownian motion – Itô processes . . . 40
4.2.1 Geometric Brownian Motion . . . 40
4.2.2 The Continuous Model of the First-Order Autoregressive Process – Ornstein-Uhlenbeck Process . . . 41
4.3 Itô's Lemma . . . 42

5 Application of Stochastic Calculus to the Validity of Financial Ratios 46
5.1 Geometric Brownian Ratios . . . 46
5.2 Mean-Reverting Ratios . . . 47
5.3 Stochastic Scale Invariance . . . 49
5.4 Notes . . . 51

III Conclusions and References 53

6 Conclusions 54

7 References 57

A Cross-Section Analysis 61

B Time-Series Analysis 73
