

The Formal Development Of A Railway Station Route Management System

by

Dong Yu Lin

A Thesis submitted in partial fulfillment
of the requirements of the Degree of

MASTER OF SCIENCE

in

SOFTWARE ENGINEERING

**FACULTY OF SCIENCE AND TECHNOLOGY
UNIVERSITY OF MACAU**

May 1995

Contents

1	Introduction	1
1.1	Background	1
1.2	Related Work	3
1.3	Overview of Methodology	4
1.3.1	Domain Analysis	5
1.3.2	Formal Methods and RAISE	6
1.4	About the Thesis	8
2	Domain Analysis	9
2.1	Introduction	9
2.1.1	Domain Analysis as Part of Software Construction	9
2.1.2	Sub-domains	10
2.1.3	Content of Domain Descriptions	12
2.1.4	Form of Domain Descriptions	14
2.2	A Narrative of the Intrinsic Application Domain	15
2.2.1	Rails &c.	15
2.2.2	Lines	15
2.2.3	Stations	15
2.2.4	Switches and Crossings	17
2.2.5	Trains	20
2.2.6	Timetables	20
2.2.7	Station Plans	21
2.3	A Formal Description of the Intrinsic Application Domain	22
2.3.1	Basic Types	22
2.3.2	Units	23
2.3.3	Stations	27
2.3.4	Lines	29
2.3.5	Railway Network	30
2.3.6	Trains	31
2.3.7	Timetables	32
2.3.8	Station Plans	34
2.4	A Narrative of Supporting Railway Technology	38
2.4.1	Signals	39
2.4.2	Interlocking	42

2.4.3	Train Tracking	46
2.4.4	Block	47
2.4.5	Locomotive Cab Signals and Automatic Stop Appliance	48
2.4.6	CTC and Centralized Supervision	48
2.4.7	Communication	49
2.5	A Formal Description of Railway Technology	50
2.5.1	Signals and Interlocking	50
2.5.2	Other Issues	51
2.6	A Narrative on Railway Staff	52
2.6.1	Railway Dispatch Staff	52
2.6.2	Railway Station Staff	52
2.6.3	Discussion	55
2.7	On the Computing & Communications Platform	56
2.7.1	X Window System and Widgets	56
2.7.2	Other Issues	59
3	Requirements Specification	60
3.1	Introduction	60
3.2	General Description	61
3.2.1	Product Perspective	61
3.2.2	Product Facilities	62
3.2.3	User Characteristics	63
3.2.4	General Constraints	63
3.2.5	Assumptions and Dependencies	64
3.3	Specific Requirements	65
3.3.1	State and Components	65
3.3.2	Functional Requirements	66
3.3.3	User Interface Requirements	69
3.3.4	Other Interface Requirements	72
3.3.5	Other Requirements	72
4	Architecture Design	73
4.1	Introduction	73
4.2	Decomposition Description	74
4.2.1	Module Decomposition	74
4.2.2	Data Decomposition	77
4.2.3	Dependency Descriptions	78
4.3	Detailed Design	78
5	From Design to Implementation	79
5.1	Introduction	79
5.2	Architecture Translation	80
5.3	Data and Function Translation	81
5.4	User Interface Translation	89
5.5	The Prototype System	94

6	Conclusion	95
6.1	Summary	95
6.2	Contributions	96
6.3	Future Work	98
A	A Detailed Formal Description of the Intrinsic Application Domain	104
B	A Detailed Architecture Design	114
B.1	Data Detailed Design	115
B.2	Module Detailed Design	124
B.2.1	X Window System	124
B.2.2	Basic States	126
B.2.3	Canvas	127
B.2.4	Drawing Modes	129
B.2.5	Command Modes	135
B.2.6	Mouse Button Message Display	149
B.2.7	Message and Filename Display	149
B.2.8	Rulers	149
B.2.9	Metric Unit Box	152
B.2.10	RoManS	152
