Integrated Machine Learning Techniques with Application to Adaptive Decision Support System for Automotive Engineering

by

Vong Chi Man

Y-A1-7401-4

A thesis submitted in fulfillment of the
requirements for the degree of

PhD. in Computer and Information Science

Faculty of Science and Technology
University of Macau

2005

TABLE OF CONTENTS

List of Figures x
List of Tables xii
List of Abbreviations xiii
Chapter 1 Introduction 1
1.1 Machine learning 1
1.1.1 Modelling for classification and prediction 2
1.1.2 Optimization 3
1.1.3 Adaptation 3
1.1.4 Integration of machine learning techniques 4
1.2 Decision support system 4
1.2.1 Data-driven DSS 5
1.2.2 Model-driven DSS 5
1.3 Problems in the existing framework for MD-DSS 8
1.4 Adaptive DSS FRAMEWORK 9
1.5 Research objective and thesis organization 10
Chapter 2 Modelling 12
2.1 Multilayer feedforward networks 12
2.1.1 Pros and cons of MFN 13
2.2 Multivariate nonlinear regression 15
2.2.1 Linear regression 15
2.2.2 Mathematical transformations 15
2.2.3 Nonlinear least squares regression 17
2.2.4 Pros and cons for multivaraite nonlinear regression 19
2.3 Support vector machines 20
2.3.1 Common kernels 22
2.3.2 SVM formulation for nonlinear regression 22
2.3.3 Computation of threshold 24

2.3.4 Pros and cons of SVM 24
2.4 Least squares support vector machines 25
2.4.1 LS-SVM for nonlinear function estimation 26
2.4.2 Tuning for the hyperparameters 27
2.4.3 Pros and cons of LS-SVM 32
2.5 Selection of modelling method in the research 34
Chapter 3 Optimization 35
3.1 Unconstrained optimization using gradient information 35
3.1.1 Newton-Raphson method 36
3.1.2 Pros and cons of Newton-Raphson method 36
3.1.3 Conjugate-gradient method 37
3.1.4 Pros and cons of Conjugate-gradient method 38
3.1.5 Quasi-Newton method 39
3.1.6 Pros and cons of Quasi-Newton method 41
3.2 Unconstrained optimization using direct search method 42
3.2.1 Genetic algorithms 42
3.2.2 Pros and cons of genetic algorithm 46
3.3 Selection of optimization method in the research 47
Chapter 4 Adaptation 48
4.1 Case-based reasoning 48
4.2 Detailed process in CBR 49
4.2.1 Similarity function in retrieval 51
4.3 Reuse 52
4.3.1 Substitutional adaptation 53
4.3.2 Transformational Adaptation 54
4.3.3 Derivational replay 55
4.4 Revise 55
4.5 Retain 56
4.6 Selection of adaptation method in the research 56
Chapter 5 Application 57
5.1 Automotive engine control unit tune-up 57

5.1.1 Objective function 60
5.1.2 Schema 62
5.1.3 Data sampling and implementation 64
5.2 Application of LS-SVM 65
5.2.1 Preprocessing and postprocessing 66
5.2.2 Training 66
5.2.2 Bayesian inference on hyperparameters 67
5.3 GA for optimization 69
5.3.1 Objective function in GA 69
5.3.2 Setups in GA 71
5.3.3 Stopping criteria 72
5.4 CBR for adaptation 72
5.4.1 Retrieval 73
5.4.2 Reuse 74
5.4.3 Adaptation knowledge 74
5.4.4 Revise 76
5.4.5 Retain 76
Chapter 6 Results 78
6.1 Results of modelling 78
6.1.1 Error functions 78
6.1.2 Results of LS-SVM 79
6.1.3 Results using MFN with backpropagation 80
6.1.4 Comparison between LS-SVM and MFN 83
6.2 Results of optimization 85
6.2.1 Storing optimal ECU setups in case library 88
6.3 Results of adaptation 88
6.3.1 Retrieval 89
6.3.2 Reuse 91
6.3.3 Revise 91
6.3.4 Retain 93
6.3.5 Verification 93

Chapter 7 Conclusions and remarks 95
7.1 Summary of the research 95
7.2 Innovation of the research.....96
7.3 Contributions of the research 97
7.4 Remarks on the techniques 99
7.5 Future direction.....100
Bibliography 102
