EXPERIMENTAL INVESTIGATION ON THE CONSOLIDATION AND VERY SMALL–STRIAN STIFFNESS PROPERTIES OF MACAU MARINE CLAY

by

SHI Xuantao

A thesis submitted in partial fulfillment of

the requirements for the degree of

Master of Science in Civil and Environmental Engineering

July 2008

Faculty of Science and Technology

University of Macau

NONMENCLATURE 7

TABLE OF CONTENTS 10

LIST OF TABLES 15

LIST OF FIGURES 16

Chapter 1 Introduction 25

1.1 Background and problem statement 25

1.2 Research objectives 28

1.3 Organization 29

Chapter 2 Literature review 30

2.1 Introduction 30

2.2 Consolidation properties of soft clay 30

2.2.1 Review the traditional consolidation test 30

2.2.2 Review the consolidation properties of marine clay 31

2.2.3 Overview of one-dimensional consolidation at constant rate of strain with vertical drainage 32

2.2.3.1 Introduction 32

2.2.3.2 CRS testing equipments 33

2.2.3.3 Constant rate of strain consolidation theories with vertical drainage 34

2.2.3.3.1 Introduction 34

2.2.3.3.2 Small strain theory (linear)-Smith and Wahls (1969) 35

2.2.3.3.3 Small strain theory (nonlinear)-Wissa's (1971) 37

2.2.3.3.4 Large strain theory-Lee (1981) 41

2.2.3.3.5 The comparison of the small strain and large strain theories 43

2.2.3.4 CRS test as a permeability testing method 43

2.2.3.5 Constant rate of strain consolidation theory with lateral outward drainage 45
2.2.3.6 Comparison between CRS and conventional consolidation tests 48
2.3 Very small-strain stiffness properties of clay 49
2.3.1. Measurement of soil shear modulus at very small-strain 49
2.3.2 Bender elements tests in the triaxial apparatus and oedometer 51
2.3.3 Factors influencing shear wave velocity measurements--shape and frequency of source wave 52
2.3.4 Interpretation methods for travel time and travel length 55
2.3.5 Some existing empirical equations to estimate the very small-strain modulus 56
Chapter 3 Equipment and testing procedures 60
3.1 Introduction 60
3.2 Reconstituted Macau marine clay (RMMC) 60
3.2.1 Consolidometer 60
3.2.2 Preparation method for RMMC 61
3.2.3 Index properties 62
3.3 Undisturbed Macau marine clay (UMMC) 63
3.3.1 Batch method 63
3.3.2 Index properties 64
3.4 Consolidation apparatus 65
3.4.1 Traditional consolidation apparatus-oedometer 65
3.4.2 Rowe cell consolidation system 66
3.4.3 The comparison between oedometer and Rowe cell 69
3.5 Consolidation testing programs 70
3.5.1 Traditional consolidation tests 70
3.5.2 Rowe cell consolidation tests 72
3.5.2.1 Introduction 72
3.5.2.2 Diaphragm loading calibration 72

3.5.2.3 Back pressure saturation method 75
3.5.2.4 Constant rate of strain test with vertical drainage in GDS Rowe cell 75
3.5.2.5 Constant rate of strain test with horizontal outward drainage in ELE Rowe cell 75
3.6 Bender element test 77
3.6.1 Experimental system set-up 77
3.6.3 Experimental procedure 80
Chapter 4 Consolidation properties of Macau marine clay 82
4.1 Introduction 82
4.2 Consolidation behaviors of RMMC 82
4.2.1 Consolidation behaviors of RMMC in the vertical direction 82
4.2.1.1Conventional consolidation tests 83
4.2.1.2 CRS tests in GDS Rowe cell 90
4.2.1.3 The comparison between conventional and CRS consolidation test results 97
4.2.2 Consolidation behaviors of RMMC in horizontal direction 100
4.2.2.1 Conventional consolidation tests 101
4.2.2.2 CRS tests in ELE Rowe cell 104
4.2.2.3 The comparison between conventional and CRS consolidation test results 109
4.2.3 The anisotropic consolidation behaviors of RMMC 113
4.3 Consolidation behaviors of UMMC 115
4.3.1 Consolidation behaviors of UMMC in the vertical direction 115
4.3.1.1 Conventional consolidation tests 115
4.3.1.2 CRS test in GDS Rowe cell 118
4.3.1.3 The comparison between conventional and CRS consolidation test results 123
4.3.2 Consolidation behaviors of UMMC in the horizontal direction 125
4.3.2.1 Conventional consolidation tests 126

4.3.2.2 CRS test in ELE Rowe cell 129
4.3.2.3 The comparison between conventional and CRS consolidation test results 134
4.3.3 The anisotropic consolidation behaviors of UMMC 137
4.4 The reliability of CRS tests 140
Chapter 5 Very small-strain stiffness of Macau marine clay 143
5.1 Introduction 143
5.2 The method to determine the value of coefficient of earth pressure at rest 143
5.3 The variation of shear wave velocity after the end of primary consolidation (EOP) 145
5.3.1 Introduction 145
5.3.2 Reconstituted Macau marine clay 148
5.3.3 Undisturbed Macau marine clay 157
Chapter 6 Variation of shear wave velocity during consolidation 167
6.1 Introduction 167
6.2 Variation of shear wave velocity in primary consolidation 167
6.3 Variation of shear wave velocity in secondary consolidation 172
Chapter 7 Summary, conclusion and recommendations 183
7.1 Overview 183
7.2 The consolidation behaviors of MMC 183
7.3 The very small-strain stiffness behaviors of MMC after 24 hours of one dimensional consolidation 185
7.4 The variation of shear wave velocity during the primary consolidation process 185
7.5 The variation of shear wave velocity during the secondary consolidation process 186
7.6 Proposed future work 186
