**Corrosion Study of Nano-Hydroxyapatite Coatings on Implant Alloys
Fabricated by Electrophoretic Deposition**

by

Wong Po Kee

M. Sc. In Electromechanical Engineering

2007/2008

**Faculty of Science and Technology
University of Macau**

TABLE OF CONTENTS

LIST OF FIGURES.....	v
LIST OF TABLES.....	ix
LIST OF ABBREVIATIONS.....	xi
ACKNOWLEDGEMENTS.....	xii
 CHAPTER 1	 1
INTRODUCTION	1
1.1 Introduction	1
1.2 Electrophoretic deposition of HAP.....	5
1.3 Nano-hydroxyapatite coatings.....	6
1.4 Objectives	7
CHAPTER 2	9
LITERATURE REVIEW	9
2.1 Biomaterials.....	9
2.2 Materials science of orthopedic implant systems.....	10
2.2.1 Total artificial hip implant	10
2.2.2 Dental implant	12
2.3 Types of implant alloys.....	13
2.3.1 Stainless steels	14
2.3.1.1 Austenitic Stainless Steel 316L	15
2.3.2 Titanium and its alloys.....	17
2.3.2.1 Commercially pure titanium.....	18
2.3.2.2 $\alpha+\beta$ titanium alloy Ti6Al4V.....	20
2.3.2.3 β titanium alloys	24
2.3.3 Cobalt-chrome alloys.....	26
2.4 Need of HAP coatings on metallic implant.....	28
2.5 Need of carbon nanotubes	29
2.6 Biological response to metallic implants.....	29
2.7 Passivation layer of metals	31
2.8 Physiological environment of human body.....	33
2.9 Corrosion of metallic materials in physiological environment	33
2.9.1 Pitting Corrosion.....	35
2.10 Electrophoretic deposition.....	37
2.10.1 Definition.....	37
2.10.2 Factors influencing EPD.....	38

2.10.3 Parameters related to the suspension	39
2.10.3.1 Particle size.....	39
2.10.3.2 Conductivity and viscosity of suspension	40
2.10.3.3 Zeta potential	41
2.10.3.4 Stability of suspension.....	41
2.10.4 Parameters related to the process.....	42
2.10.4.1 Effect of deposition time	42
2.10.4.2 Applied voltage.....	43
2.10.4.3 Concentration of solid in suspension.....	43
2.10.4.4 Conductivity of substrate.....	44
2.10.5 Forms of EPD	44
2.10.5.1 Aqueous (water-based) EPD.....	44
2.10.5.2 Non-aqueous EPD	45
2.10.6 Drying of deposits produced by EPD	45
2.11 Corrosion tests for biomaterials in physiological environment.....	47
2.11.1 Principle of corrosion	47
2.11.2 Corrosion rate (current density).....	49
2.11.3 DC techniques.....	49
2.11.3.1 Anodic scan.....	50
2.11.3.2 Cathodic scan.....	53
2.11.4 AC techniques: electrochemical impedance spectroscopy (EIS)	54
2.11.4.1 Basic principles.....	54
2.11.4.2 Principles of EIS measurements	55

CHAPTER 3 59

EXPERIMENTAL DETAILS..... 59

3.1 Nanocrystalline hydroxyapatite powder (n-HAP).....	59
3.2 Carbon Nanotubes (CNT).....	60
3.3 Substrate alloys.....	61
3.4 Simulated body fluids.....	62
3.5 Specimen preparation	62
3.6 Electrophoretic deposition (EPD).....	63
3.6.1 Nano-hydroxyapatite coatings.....	63
3.6.2 CNT reinforced n-HAP coatings	64
3.7 Sintering.....	64
3.8 Corrosion tests	65
3.8.1 DC technique: OCP measurement and polarization scans	66
3.8.2 AC technique: electrochemical impedance spectroscopy (EIS) .	67

3.9 Surface characterizations.....	68
3.10 Adhesion strength test.....	70
3.11 Vickers hardness test.....	72
3.12 Biocompatibility test/ In vitro bioactivity tests	73
3.13 Coating thickness.....	73
CHAPTER 4	75
RESULTS AND DISCUSSION	75
4.1 Corrosion studies of various alloys in different SBFs.....	75
4.2 Corrosion behavior of 316L in various SBF.....	76
4.3 Corrosion behavior of Ti-alloys in various SBF.....	79
4.4 Corrosion behavior of different alloys in various SBFs	84
4.4.1 Corrosion behavior of various alloys in 0.9% NaCl solution.....	84
4.4.2 Corrosion behavior of various alloys in Ringer's solution.....	87
4.4.3 Corrosion behavior of various alloys in Hank's solution	93
4.5 Anodic EPD (substrate as anode)	96
4.5.1 Study of spherical shaped mHAP coated Ti6Al4V	96
4.5.1.1 Microstructural and metallographic analysis.....	96
4.5.1.2 Corrosion behavior of mHAP coated Ti6Al4V in Ringer's solution.....	103
4.5.2 Corrosion behavior of mHAP coated 316L in Ringer's solution	109
4.6 Cathodic EPD (substrate as cathode).....	111
4.6.1 Study of various n-HAP coated Ti6Al4V in Hank's solution...	113
4.6.1.1 Microstructural and metallographic analysis.....	113
4.6.1.2 OCP-time measurement and polarization study	123
4.6.1.3 Electrochemical impedance spectra (EIS)	127
4.6.1.4 Hardness test.....	131
4.6.1.5 Adhesion test and biocompatibility test.....	132
4.6.2 Corrosion behavior of various n-HAP coated cp Ti in Hank's solution	136
4.6.2.1 Microstructural and metallographic analysis.....	136
4.6.2.2 OCP-time measurement and polarization study	140
4.6.2.3 Electrochemical impedance spectra.....	143
4.6.2.4 Hardness test.....	145
4.6.2.5 Adhesion strength and biocompatibility test	146
4.6.3 Study of various n-HAP coated 316L in Hank's solution.....	147
4.6.3.1 Microstructural and metallographic analysis.....	147
4.6.3.2 OCP-time measurement and polarization study	151

4.6.3.3 Electrochemical impedance spectra.....	154
4.6.3.4 Hardness test.....	156
4.6.3.5 Adhesion strength and biocompatibility test	157
4.7 Determination of optimum n-HAP coating	158
4.7.1 OCP-time measurement and polarization study	158
4.7.2 Electrochemical impedance spectra.....	161

CHAPTER 5	163
-----------	-----

CONCLUSIONS	163
-------------------	-----

5.1 Corrosivity of various SBFs	163
5.2 Corrosion behavior of various implant grade alloys	163
5.3 Corrosion behavior of cathodic EPD coatings	164
5.4 Adhesion strength and biocompatibility of cathodic EPD coatings	165
5.5 Suggestions for future work	165
