C.3

Optimization of Automotive Engine Power Performance under Numerical and Nominal data

by

Ng Ka Ian

M. Sc. in Electromechanical Engineering

2009

Faculty of Science and Technology
University of Macau

TABLE OF CONTENTS

LIST OF FIGURES.....v

LIST OF TABLES.....vii

LIST OF ABBREVIATIONS.....x

ACNOWLEDGEMENTS.....xi

CHAPTER 1. INTRODUCTION

1.1 Background.....1

1.2 Literature survey on engine modeling and optimization methods.....5

1.2.1 Engine Modeling.....6

1.2.1.1 White-box identification technique.....6

1.2.1.2 Black-box identification technique.....7

1.2.1.3 Statistical Techniques.....8

1.2.1.4 Neural Networks.....8

1.2.1.5 Support vector machines.....9

1.2.1.6 Least squares support vector machines.....10

1.2.2 Optimization for nonlinear function.....11

1.2.2.1 Iterative method.....12

1.2.2.2 Direct search techniques.....13

1.2.3 Project objectives.....13

1.2.3.1 Overall methodology framework.....15

CHAPTER 2. – LEAST SQUARES SUPPORT VECTOR MACHINES

2.1 Least squares Support vector machines (LS-SVM) for nonlinear function estimation.....16

CHAPTER 3 – QUASI-NEWTON METHOD AND GENETIC ALGORITHM

3.1 Quasi-Newton method.....19

3.2 Genetic algorithm.....21

3.2.1 Generation of Initial Population.....23

3.2.2 Crossover Operator.....23

3.2.3 Mutation Operator.....24

3.2.4 Elitism and niching.....24

3.2.5 Stopping criterion.....25

CHAPTER 4 TASK 1 - MODELLING AND OPTIMIZATION OF ENGINE POWER PERFORMANCE UNDER NUMERICAL VARIABLES AND RARE DATA

4.1 Modeling.....26

4.1.1 Schema.....27

4.1.2 Data Sampling and Implementation.....31

4.1.3 Data pre-processing and post-processing.....33

4.1.4 Error function.....34

4.1.5 Procedures of tuning hyper-parameter values selection.....35

4.1.6 Training.....37

4.1.7 LS-SVM Results.....38

4.2 Objective function for optimization.....41

4.3 Quasi-Newton method results.....41

4.3.1 Evaluation of QN results under numerical variables and rare data 43

4.4 Genetic algorithm results.....45

4.4.1 Evaluation of GA results under numerical variable and rare data.....47

4.5 Comparison of Quasi-Newton method and GA results.....48

CHAPTER 5. TASK 2 – MODELING AND OPTIMIZATION OF ENGINE POWER PERFORMANCE UNDER NUMERICAL AND NOMINAL VARIABLES

5.1 Modeling.....50

5.1.1 Schema.....51

5.1.2 Data Sampling and Implementation.....53

5.1.3 Data pre-processing and post-processing.....55

5.1.4 Error function.....57

5.1.5 Procedures of hyper-parameter values selection.....57

5.1.6 Training.....57

5.1.7 LS-SVM Results.....57

5.2 Objective function for optimization.....61

5.3 Quasi- Newton Method results.....62

5.3.1 Evaluation of QN results under numerical and nominal data.....64

5.4 Genetic algorithm results.....65

5.4.1 Evaluation of GA result under numerical and nominal data.....66

5.5 Comparison of Quasi-Newton method and GA.....68

CHAPTER 6 – CONCLUSIONS

6.1 Conclusions.....70

6.2 Originalities of research.....71

6.3 Recommendations for future work.....72

REFERENCES.....73

APPENDIX 1 Selected MatLab Program listing for LS-SVM module and Quasi-Newton method under numerical data only.....78

APPENDIX 2 Selected MatLab Program listing for LS-SVM module and GA under numerical data only.....80
