

**Online Re-configurable Abnormal & Hazard
Status Monitoring and Advisory System based on
Generic Fault Model**

by

Lan Ting

Master of Electrical and Electronics Engineering

2002

**Faculty of Science and Technology
University of Macau**

TABLE OF CONTENTS

List of Figures	iv
List of Tables	v
List of Abbreviations	vi
Chapter 1: INTRODUCTION.....	1
1.1 Monitoring the Dynamic Systems	1
1.1.1 Background and Motivation	1
1.1.2 Operative Fault Diagnosis.....	2
1.1.3 Advisory System.....	4
1.2 Review of Related Researches.....	5
1.2.1 Rule-Based Production System	5
1.2.2 Decision Tree.....	6
1.2.3 Fault Dictionaries.....	7
1.2.4 Model-Based Approaches.....	8
1.2.6 Artificial Neural Networks	14
1.2.7 Active Database and Knowledge Base Systems.....	16
1.3 Guide to the Thesis	17
Chapter 2: THE APPROACH.....	19
2.1 Goals and Non-goals.....	19
2.2 Measurement Interpretation	20
2.2.1 Review of ATMI.....	20
2.2.2 Measurement Interpretation in ASMAS	21
2.3 Object Oriented Representation.....	22
2.3.1 Object Model	22
2.3.2 Data Object Structure.....	24
2.3.3 Behavior Detection	26
2.3.4 Benefits	29
2.4 Model-Based Diagnosis	29
2.4.1 The Advantages of the Model-Based Diagnosis.....	31

2.4.2 Generic Fault Model	31
2.4.3 Suspect Fault Generation	33
2.4.4 Fault Confirmation.....	34
2.4.5 Fault Tracking.....	35
2.4.6 Multi-Fault Diagnosis.....	36
2.5 Advising.....	36
2.5.1 Warning Predicates	36
2.5.2 Ranking of Faults.....	37
2.5.3 Presentation of Operating Guides	37
2.6 Text-to-Speech Technology.....	38
2.6.1 Categories of Text-to-Speech Technology	38
2.6.2 Benefits of Text-to-Speech	39
2.7 Handling Special Faults	40
2.7.1 Data Lost.....	40
2.7.2 Unknown Fault	41
Chapter 3: CRUCIAL MISSIONS AND DIFFICULTIES	42
3.1 Dynamic Data and Data Integration	42
3.2 On-line Diagnosis and Temporal Reasoning	42
3.3 Handling Concurrent Emergency	43
3.4 Controlling Complexity	44
3.5 Adaptive Capability	44
3.6 Integration with Other Application Systems	45
Chapter 4: DESIGN AND IMPLEMENTATION OF ASMAS.....	46
4.1 Main Tasks.....	46
4.2 Design Overview	47
4.3 System Architecture.....	49
4.3 Independent Knowledge Base.....	51
4.4.1 Hierarchical Structure of Knowledge Base.....	52
4.4.2 Data Object Model.....	53
4.4.3 Fault Model.....	55
4.4.4 Knowledge Base Management	57

4.5 Data Collection and Preprocessing	58
4.5.1 Data Collection	58
4.5.2 Data Preprocessing.....	60
4.6 Graphic Monitoring Module	61
4.7 Fault Diagnosis	62
4.7.1 Independent Diagnostic Work Thread	62
4.7.2 Work Area.....	63
4.7.3 Diagnosis	64
4.8 Alarm and Advise	66
4.8.1 Alarm Message Filtering and Classifying.....	66
4.8.2 Ranking of Alarm Messages.....	66
4.8.3 Browsing Alarm Messages	67
4.8.4 Speech Synthesis and Broadcast.....	67
Chapter 5: Experimental Results	69
5.1 Electric Water-Heater	69
5.1.1 Moment 3: $t=2.4$	73
5.1.2 Moment 4: $t=2.7$	75
5.1.3 Moment 6: $t=13.0$	75
5.2 Refrigeration System	76
5.3 Response Time.....	77
Chapter 6: DISCUSSION AND CONCLUSIONS.....	81
6.1 Conclusions.....	81
6.2 Limitations	83
6.3 Further Work.....	84
6.3.1 Behavior Detection	84
6.3.2 Component Connection	84
6.3.3 Speeding up the Processes	84
6.3.4 Improvement of Monitoring Interface	85
6.3.5 Real Application	85
BIBLIOGRAPHY	86
APPENDIX A: List of Source Code Files.....	90
