**Robust Control System Design:
 H_∞ Loop Shaping For Double Inverted Pendulum**

by

Cheang Sek Un

Master of Science in Electrical and Electronics Engineering

September 2002

**Faculty of Science and Technology
University of Macau**

Table of Contents

Abstract	iii
Table of Contents	iv
List of Figures	vii
List of Tables	x
ACKNOWLEDGMENTS	xi
Chapter 1 Literature Review.....	1
1.1. Introduction.....	1
1.2. Research Signification	1
1.3. Brief Development History.....	3
1.3.1 Single Inverted Pendulum.....	3
1.3.2 Double Inverted Pendulum	5
1.4. Control Method Discussion	7
Chapter 2 Model Development for Inverted Pendulum	9
2.1. Introduction.....	9
2.2. Equations of Motion for Multi-Link Inverted Pendulum	9
2.3. Static Friction Models.....	13

2.4.	Multi-Link Dynamic Equations with Friction	14
2.5.	Double Link Inverted Pendulum System Description	19
Chapter 3	H_∞ Loop Shaping Design Procedure.....	22
3.1.	Introduction.....	22
3.2.	Negative Feedback Control System.....	22
3.3.	Descriptions of Linear Dynamical System	24
3.4.	Singular Value Decomposition	25
3.5.	Linear Fractional Transformation	27
3.6.	H_∞ Loop Shaping Design Procedure (LSDP)	29
Chapter 4	H_∞ Controller Implementation for Double Inverted Pendulum.....	33
4.1.	Introduction.....	33
4.2.	Linear Model of Double Link Inverted Pendulum	33
4.3.	Feedback Controller Parameters Choice.....	34
4.4.	Work Flow for the Controller Design	35
4.5.	System Implementation	36
4.5.1	Case I – $W_2=Diag[10,100,120]$	37
4.5.2	Case II – $W_2=Diag[10,120,150]$	45
4.5.3	Case III – $W_2=Diag[10,100,240]$	53
4.5.4	Comparison.....	61

Chapter 5	Conclusions and Future Development.....	63
5.1.	Introduction.....	63
5.2.	Summary.....	63
5.3	Future Development.....	65
Reference	66
Appendix A	State Space Format of Double Inverted Pendulum.....	70
Appendix B	Double Inverted Pendulum Apparatus.....	73
Appendix C	Matlab Simulation Program	76
Appendix D	Real Time Implementation Program	83
Appendix E	Publications.....	88
