**Development of a Novel Electro-Hydraulic Fully Variable
Valve-Train for Four-Stroke Automotive Engines**

By

Li Ke

Master of Science in Electromechanical Engineering

2005

FACULTY OF SCIENCE AND TECHNOLOGY

TABLE OF CONTENTS

LIST OF FIGURES.....	iv
LIST OF TABLES.....	vii
LIST OF ABBREVIATIONS.....	viii
ACKNOWLEDGMENT.....	ix
CHAPTER 1: INTRODUCTION.....	1
1.1 Background.....	1
1.1.1 Traditional four-stroke engine valve train.....	1
1.1.2 Valve timing and lift.....	3
1.1.3 Variable valve timing and lift technique.....	4
1.2 Literature survey on Variable valve timing / lift technology	6
1.2.1 Production designs.....	6
1.2.2 Design under development	15
1.3 Limitations of the current variable valve train systems.....	22
1.4 Project objectives.....	24
CHAPTER 2: System design.....	25
2.1 Schematic design of the system.....	25
2.2 Component description.....	26
2.3 Working principle.....	29
2.4 Proposed production design.....	33
CHAPTER 3: Mathematic model and dynamic analysis.....	34
3.1 Mathematic model.....	34
3.2 Simulation.....	41
3.3 Simulation results	44
3.4 Phase analysis on the input cam and the out pit valve	46
3.5 Torque consumption simulation of the novel EHFVVT system	48
CHAPTER 4: Experimental results and design evaluation.....	52

4.1	Prototype model.....	52
4.2	Detail component descriptions	53
4.3	Valve output profile analysis	59
4.4	Camshaft driving torque analysis	63
4.4.1	Torque consumption simulation of traditional poppet valve system....	64
4.4.2	Torque consumption simulation of ideal novel EHFVVT system.....	67
CHAPTER 5:	Conclusions and recommendations.....	71
5.1	Conclusions	71
5.2	Originality and contribution of the reasurch.....	72
5.3	Recommedations for future work	73
Reference	75
Publications	78
