University of Macau**

Contents

Abstract	i
Acknowledgements	iii
Contents	iv
List of Tables	viii
List of Figures	ix
Nomenclature	xvii
1 Introduction	1
2 Literature Review	7
2.1 Introduction	7
2.2 Theoretical studies	8
2.3 Experimental studies	11
2.4 Numerical studies	14
2.4.1 Models for the Reynolds-averaged Navier-Stokes (RANS) equations	16
2.4.2 Large eddy simulation (LES)	21

2.4.3	Direct numerical simulation (DNS)	24
2.4.4	Discrete vortex methods	28
2.4.5	Kraichnan's method	30
2.5	Objective of the present work	32
3	Simulation of turbulent flow field by Kraichnan's method	35
3.1	Introduction	35
3.2	Mathematical model of simulated turbulence	36
3.3	Validation of the simulated turbulent flow field	40
4	Simulation of turbulent flow field by Reynolds-averaged Navier-Stokes equations with the $k-\epsilon$ model	44
4.1	Introduction	44
4.2	Reynolds-averaged Navier-Stokes(RANS) equations	45
4.3	Modelling of the turbulent flow field	48
4.4	Numerical model used to solve the turbulent flow field	50
4.4.1	The general differential equation	50
4.4.2	The staggered grid	51
4.4.3	Control volume formulation for the general differential equation	53
4.4.4	The hybrid scheme for convection and diffusion terms	54
4.4.5	Discretization of the general differential equation	57
4.4.6	Pressure correction equation - The SIMPLE-type algorithm	58

4.5	Numerical method	61
4.5.1	Solution of the linear equations: the better estimate for the off-axis element	61
4.5.2	Solution of linear equations: the multigrid method	62
4.5.3	Solution Algorithm - the iterative procedure	67
4.5.4	Convergence	69
4.6	Verification of the simulated flow field	72
5	Modelling of the particle transport	74
5.1	Introduction	74
5.2	Particle transport	76
5.2.1	Settling in the absence of particle inertia	80
5.3	Analysis of the integration time step	81
5.4	Modelling of the particle dispersion	84
5.4.1	Particle dispersion in turbulent flow field generated by the Kraichnan's method	84
5.4.2	Particle dispersion in turbulent flow field generated by the $k-\epsilon$ model	89
6	Discussion of results	92
6.1	Results obtained by the Kraichnan's method	93
6.1.1	Mean square dispersion of particles	93
6.1.2	Mean square relative velocity	106

6.1.3	Particle velocity decays	114
6.1.4	Particle velocity autocorrelations	115
6.1.5	Particles' settling velocity	118
6.2	Results obtained by using the k - ϵ model	136
6.2.1	Mean square dispersion of particles	136
6.2.2	Mean square relative velocity	141
6.2.3	Particle velocity decays	149
6.2.4	Particle velocity autocorrelations	151
6.2.5	Particles' settling velocity	155
7	Conclusion and recommendations for future work	159
	Reference	166
