

**The Hybrid Real-time Simulation System  
based on the Electromechanical Transient  
Process Simulation of Power Systems**

by

**Zhai Pei**

University of Macau**

## TABLE OF CONTENTS

LIST OF FIGURES .....	iii
LIST OF TABLES .....	v
1. Introduction.....	1
1.1 Introduction to simulation of power system .....	1
1.1.1 Introduction to simulation of system .....	1
1.1.2 Introduction to digital simulation of power system .....	2
1.1.3 The main applied realms of digital simulation of power system .....	3
1.1.4 The development process of power system simulation.....	4
1.2 The main methods of digital simulation of power system .....	7
1.2.1 Introduction.....	7
1.2.2 Non real-time simulation .....	8
1.2.3 Real-time simulation devices of power system.....	11
1.3 Introduction to real-time simulation platform based on the electromechanical transient process.....	13
1.4 The state of the hybrid simulation at present .....	15
1.4.1 The electromechanical and electromagnetic transient process hybrid simulation .....	15
1.4.2 The digital and analog hybrid simulation.....	15
1.5 The background and purpose of this thesis.....	19
1.6 The main work of this thesis.....	19
2. The construction of hybrid real-time simulation system based on the electromechanical transient process.....	21
2.1 The configuration of the real-time hybrid simulation system based on electromechanical transient process simulation.....	21
2.1.1 The configuration of the whole real-time hybrid simulation system .....	21
2.1.2 The configuration of the real-time hybrid simulation system based on the electromechanical transient process simulation.....	22
2.2 The electromechanical transient process simulation software .....	24
2.2.1 The configuration of the electromechanical transient process simulation software .....	24
2.2.2 The analysis of the function of the electromechanical transient process simulation software.....	26
2.2.3 The program of serial port communication of the electromechanical transient process simulation.....	29
2.3 The interface device between the digital simulation and analog simulation.....	35
2.3.1 The configuration and function of the digital signal processor.....	35
2.3.2 The program design of DSP.....	42
2.4 Physical Devices: PID excitation controller and relay protector .....	44
2.4.1 The analog model of PID excitation controller.....	44

2.4.2	The analog model of relay protector .....	47
2.5	The conclusion of chapter 2 .....	48
3.	The testing research of the hybrid real-time simulation system .....	50
3.1	The introduction of the experimental system.....	50
3.2	The testing experiments of the hybrid simulation on the EPRI-36 system .....	51
3.2.1	Hybrid simulation experiment (Excitation controller as the physical device) 52	
3.2.2	Hybrid simulation experiment (Relay protector as the physical device) ...	53
3.3	The conclusion of chapter 3 .....	54
4.	Analysis of the feature of real-time on the electromechanical transient process simulation system .....	55
4.1	The design of the structure of communication program .....	55
4.2	The program of managing the serial port.....	58
4.3	The experiment to test the communication response time .....	61
4.4	The conclusion of chapter 4.....	63
5.	The hybrid real-time simulation system including RTDS.....	64
5.1	The critical technologies of realization of the simulation system .....	64
5.2	The schemes of the real-time hybrid simulation including RTDS .....	66
5.2.1	The scheme using digital interface.....	66
5.2.2	The scheme using analog interface .....	67
5.3	The selection of the communication interface in the hybrid simulation system ....	67
5.4	The conclusion of chapter 5.....	69
6.	Conclusions.....	70
7.	Reference .....	71
	APPENDIX : Program of Digital Signal Processor.....	75
	VITA .....	82
