

**Laboratory Study of Shear Wave Velocity and Very  
Small Strain Modulus of Macao Marine Clay under  
Anisotropic Stress Condition**

by

**HAO Gang**

A thesis submitted in partial fulfillment  
of the requirement of the Degree of

**Master of Science in Civil Engineering**

**2008**

**Faculty of Science and Technology  
University of Macau**

# Content

<b>Chapter 1 Introduction</b> .....	9
1.1 Background and importance.....	9
1.2 Objective and scope.....	11
1.3 Organization .....	12
<b>Chapter 2 Literature Review</b> .....	14
2.1 Introduction .....	14
2.2 Small-strain modulus.....	14
2.2.1 Strain levels .....	14
2.2.2 Modulus degradation .....	15
2.3 Methods to determine the shear modulus of soil.....	16
2.3.1 Field tests.....	16
2.3.1.1 Seismic cross-hole test.....	16
2.3.1.2 Seismic down-hole/up-hole test.....	17
2.3.1.3 Seismic cone test .....	17
2.3.2 Laboratory tests .....	18
2.3.2.1 Resonant column test.....	18
2.3.2.2 Cyclic triaxial test.....	19
2.3.2.3 Bender element test .....	20
2.4 Empirical equations .....	21
2.4.1 Empirical equations from SPT and CPT tests .....	21
2.4.2 Empirical equations from basic engineering properties .....	22
2.4 Fundamentals of bender element testing techniques.....	29
2.4.1 Introduction .....	29
2.4.2 Working mechanism .....	29
2.4.3 Testing equipments and principle .....	30
2.4.4 Determination of travel distance.....	32
2.4.5 Input signal .....	33
2.4.6 Techniques for determination of travel time.....	33
2.4.6.1 Travel time as the first direct arrival in output signal.....	34
2.4.6.2 Travel time between characteristic peaks of input and output signals .....	34
2.4.6.3 Travel time by cross-correlation of input and output signals ..	34

2.4.6.4 Travel time using the second arrival in the output signal .....	35
2.4.7 Potential problems of bender element testing.....	35
2.4.7.1 Electromagnetic coupling-Crosstalk.....	36
2.4.7.2 Near field effect .....	38

## **Chapter 3 Testing Apparatus and Specimen Preparation ..... 42**

3.1 Introduction .....	42
3.2 Testing apparatus .....	42
3.2.1 Sample preparation apparatus.....	42
3.2.2 Triaxial testing apparatus.....	43
3.2.2.1 Auto triaxial system .....	43
3.2.3 Bender elements testing apparatus .....	44
3.3 System Calibration .....	46
3.3.1 Load cell calibration .....	46
3.3.2 Cell pressure and Effective pressure calibration .....	46
3.3.3 Volume-measuring device calibration .....	47
3.3.4 LVDT calibration.....	47
3.3.5 Bender element calibration.....	47
3.4 Properties of testing soil .....	48
3.5 Sample preparation.....	55
3.5.1 Consolidometer preparation .....	55
3.5.2 Trimming of specimens .....	56
3.5.3 Triaxial specimen preparation .....	57

## **Chapter 4 Testing Program and Procedures ..... 59**

4.1 Introduction .....	59
4.2 Main testing program.....	59
4.2.1 Constant stress ratio tests.....	59
4.2.2 Isotropic unloading and reloading.....	60
4.3 Testing procedures .....	63
4.3.1 Saturation.....	63
4.3.2 Main testing.....	63
4.3.3 Determination of final water content.....	63
4.3.4 Determination of shear wave velocity.....	64

## **Chapter 5 Test Results..... 66**

5.1 Introduction .....	66
5.2 Constant stress ratio test results.....	66
5.3 Isotropic loading and unloading test results .....	77
5.4 Constant $p'$ test results.....	83
5.5 Summary and discussion .....	89

## **Chapter 6 Empirical Expression for Very Small Strain Shear**

<b>Modulus</b> .....	95
----------------------	----

6.1 Introduction .....	95
6.2 Evaluation of void ratio function.....	95
6.3 Evaluation of stress exponent.....	97
6.4 Comparison with various published expressions.....	100
6.5 Comparison with field test data.....	105

## **Chapter 7 Conclusions and Further work**

7.1 Summary of work done .....	108
7.2 Conclusions .....	109
7.2.1 Laboratory study on Macao marine clay .....	109
7.2.2 Empirical equations for Macao marine clay.....	110
7.3 Further work .....	111

<b>References</b> .....	113
-------------------------	-----
