

**Simulation on I-V Feature of Protection System for
Superconducting Cable**

by

Lao Man I

Master of Science in Electrical and Electronics Engineering

2008

**Faculty of Science and Technology
University of Macau**

TABLE OF CONTENTS

TABLE OF CONTENTS.....	I
LIST OF FIGURES	V
LIST OF TABLES.....	VIII
LIST OF ABBREVIATIONS.....	IX
ACKNOWLEDGMENTS	X
CHAPTER 1 : MOTIVATION.....	1
1.1 Superconducting Cables.....	1
1.2 The Problem.....	2
1.3 Cable Models and Protection System	2
CHAPTER 2 : SUPERCONDUCTORS AND GINZBURG – LANDAU	
EQUATIONS	6
2.1 Type of Superconductors	14
2.1.1 Type I and Type II superconductors	15
2.2 Time Dependent Ginzburg-Landau Equation Using in the	
Simulation 17	
2.2.1 The Energy Function in Ginzburg-Landau	
Equation	18
2.2.2 The Discretization and Calculation Procedure to	
the Energy Function in Ginzburg-Landau Equation.....	20
CHAPTER 3 : VALIDATION OF THE SIMULATION PROGRAM IN	
DIFFERENT MAGNETIC FIELDS AND TYPES OF DEVICE	
CONDITIONS	23
3.1 The Simulations	23
3.1.1 Simulations at Different Magnetic Filed Strength.....	24
3.1.1.1 The Low Magnetic Field.....	24
3.1.1.2 The Medium Magnetic Field	25
3.1.1.3 The High Magnetic Field.....	28
3.1.2 Simulations on Superconductor Device.....	31
3.1.2.1 Pinning Effect	31
3.1.2.2 Junction/ Interface.....	32

3.1.2.3	Linear Anti-symmetric Magnetic Field	33
3.1.2.4	Current Effect in Two Material Regions	35
3.1.2.5	Junction with Two Material Parameters for Three Regions	36
3.2	The Purpose of the Tests.....	37
CHAPTER 4	: FLUX MOTION IN SUPERCONDUCTING AND NON-SUPERCONDUCTING STRUCTURES.....	38
4.1	Model of SFFT Type Layout	38
4.2	Simulation on the SFFT for applying to the power cables	40
4.2.1	Vortices Motion in Type I and Type II Superconducting Regions	41
4.2.2	Non-superconducting and Type II Superconducting Regions	42
4.2.2.1	Vortices Motion in Non-superconducting and Type II Superconducting Regions.....	42
4.2.2.2	The Interface Effect Between Non-superconducting and Type II Superconducting Regions	43
4.2.2.3	Calculation in the Perpendicular Direction to the Magnetic H Field.....	44
4.2.2.4	Calculation on the Parallel Direction to the Interface	46
4.2.3	Vortices Motions in Two Type II Superconducting Regions	48
4.2.3.1	The Large Scale	48
4.2.3.2	The Small Scale	50
4.3	The Brief Summary.....	51
CHAPTER 5	: I-V CHARACTERISTIC FROM SIMULATION ON DESIGN STRUCTURE	52

5.1 The idea for having the I-V features of superconducting cable	52
5.2 The Settings in the Simulations	55
5.3 The Result on the Speed Characteristics in Designed Structure	58
5.3.1 The Result of Set A.....	59
5.3.2 The Result of Set B.....	60
5.3.3 The Result of Set C.....	62
5.3.4 Comparing the Results of Set A, Set B and Set C	63
5.4 Comparison with the Adjusted Data and the Raw Data of Calculated Speed.....	64
5.4.1 The Distribution.....	64
5.4.2 The Comparison between the Reformed Data and the Raw Results.....	65
5.5 Consideration of the Vortex Size	67
5.5.1 The Normalization	67
5.5.2 The Comparison on the Vortices Sizes.....	68
5.6 Summary of the Simulation Results.....	70
CHAPTER 6 : PROTECTION SYSTEMS FOR SUPERCONDUCTING POWER CABLES	71
6.1 The Characteristics of Protection System	71
6.1.1 Monitoring the Operator Temperature.....	71
6.1.2 Protecting the Power Cable and Equipment	72
6.1.3 Alternated Applications for Flux Induced Voltage on the Power Cable	75
6.1.4 Circuit Functions for Design.....	76
6.2 Accomplishment	76
6.2.1 Reliable Simulation on Computing System Characteristics	76
6.2.2 Potent Subject for Patent.....	77
CHAPTER 7 : CONCLUSIONS AND FUTURN WORK.....	78

7.1 Conclusions.....	78
7.2 Future Work	79
BIBLIOGRAPHY.....	80
APPENDIX A: MATLAB PROGRAM LISTED FOR REFERENCE.....	84
PUBLICATIONS.....	93
VITA.....	94
