

**Some Applications of Support Vector Machines in
Financial Prediction**

by

Pun Pou Kao

Master of Science in Mathematics

2008

**Faculty of Science and Technology
University of Macau**

TABLE OF CONTENTS

LIST OF FIGURES	iii
LIST OF TABLES	iv
GLOSSARY	v
LIST OF ABBREVIATIONS	vi
PREFACE	vii
CHAPTER 1: Introduction	1
CHAPTER 2: Formal framework for learning	3
2.1 Empirical sampling	3
2.2 Error functions, expected errors and approximation errors	4
2.3 Convergence in probability	7
2.4 Definition of learning	8
2.5 Uniform convergence and consistency for ERM learning	10
CHAPTER 3: Symmetrization Procedure	13
3.1 Symmetric random variables	13
3.2 Uniform extension of comparsion inequality	13
CHAPTER 4: Rademachers	16
4.1 Sequence of independent Bernoulli variables	16
4.2 Rademachers and their sums	17
4.3 Rademacher sum of sysmmetric random variables	19
4.4 Uniform generalization	21
4.5 Elementary Inequalities	23
CHAPTER 5: Applications to learning theory	26
5.1 Family of indicators and growth functions	27
5.2 The Vapnik-Chervonenkis dimension	28
5.3 Sufficient sample size and estimation error	30
CHAPTER 6: Linear support vector machines	33

6.1	Hyperplanes	33
6.2	Linear support vector machine	34
6.3	Lagrange optimization and its dual problem	37
6.4	Feature Spaces	38
CHAPTER 7: Data Preprocessing		40
7.1	Find Bad Input method	40
7.1.1	The bankruptcy prediction problem	40
CHAPTER 8: Two parts test method		48
8.1	Odom Shadra IEEE data	48
8.2	Bank(Group) in Macao (improve)	49
CHAPTER 9: The Applications of SVM in "Hang Sang Index"		52
9.1	The Background Knowledge	52
9.2	The information of "Hang Sang Index".	53
9.3	Buy and Hold	53
9.4	Use "Two parts test Method" to obtain trading signals	54
9.5	Compare the profit:	55
9.6	Conclusion	55
APPENDIX A: Sequence of identical random variables		57
BIBLIOGRAPHY		59
