IN-SITU SHEAR WAVE MEASUREMENT AND GROUND  
RESPONSE ANALYSIS FOR DEVELOPING  
SITE-DEPENDENT RESPONSE SPECTRA IN MACAU

by

Thanat Sae Teng

Master of Science in Civil Engineering

2009

Faculty of Science and Technology  
University of Macau

# Contents

**Abstract**

**List of Figures**

**List of Tables**

**List of Symbols**

**Acknowledgements**

**Chapter 1 Introduction**

1.1 General.....	1
1.2 Background.....	2
1.3 Objective and Scope.....	3

**Chapter 2 Literature Review**

2.1 Introduction.....	4
2.2 Seismic Waves.....	4
2.2.1 Body waves and surface waves.....	4
2.2.2 Waves propagation.....	5
2.2.3 Attenuation of stress waves.....	7
2.3 Seismology and Earthquake.....	8
2.3.1 Composition of earth.....	8
2.3.2 Convection phenomenon in mantle layer.....	9
2.3.3 Movement of crust.....	10
2.3.4 Earthquake magnitudes.....	11
2.3.5 Strong ground motion and its measurement.....	12
2.3.6 Ground motion parameters.....	16
2.3.6.1 Amplitude parameters.....	16
2.3.6.2 Ground motion spectra.....	17
2.4 Ground Response Analysis.....	19
2.4.1 Introduction.....	19

2.4.2	Linear approach.....	19
2.4.2.1	Uniform undamped soil on rigid rock.....	19
2.4.2.2	Uniform damped soil on rigid rock.....	20
2.4.2.3	Uniform damped soil on elastic rock.....	21
2.4.2.4	Layered damped soil on elastic rock.....	21
2.4.3	Equivalent linear approximation of nonlinear response.....	22
2.5	Shear Wave Velocities Acquisition Methods.....	23
2.5.1	Introduction.....	23
2.5.2	Crosshole seismic test.....	24
2.5.3	Downhole seismic test.....	26
2.5.4	Standard penetration test.....	27
2.6	Empirical Equations.....	28
2.6.1	Introduction.....	28
2.6.2	Correlation of $V_s$ with SPT N value.....	29
2.6.3	Correlation of $V_s$ with different rock types.....	30
2.7	Codes for Seismic-resistant Design.....	31
2.7.1	Introduction.....	31
2.7.2	Code for seismic design of buildings (GB 50011-2001).....	31
2.7.3	Code for safety and actions for building and bridge structures (RSAEEF, Macau).....	33

## **Chapter 3 Field Test Instrumentations and Testing**

### **Procedure**

3.1	Introduction.....	35
3.2	Standard Penetration Testing Equipment and its Application.....	35
3.3	Crosshole Seismic Testing Instrumentation and its Application.....	37
3.3.1	Using P-SV probe as source.....	37
3.3.2	Using SPT hammer as source.....	41
3.4	Downhole Seismic Testing Instrumentation and its Application.....	43
3.5	In-situ soil Samples Collection and Laboratory Tests.....	45

## **Chapter 4 Testing Sites**

4.1	Introduction.....	46
-----	-------------------	----

4.2	Sites with In-situ Seismic Tests.....	48
4.2.1	Campus.....	48
4.2.2	Chun Su Mei.....	50
4.2.3	Ocean World.....	53
4.2.4	Vehicle Detention Centre.....	56
4.2.5	Oriental Golf Course.....	58
4.3	Other Sites with SI Data.....	62

## Chapter 5 Test Results and Correlation Studies

5.1	Introduction.....	67
5.2	Test Results.....	67
5.2.1	Shear wave velocities measured from in-situ test.....	67
5.2.1.1	Campus.....	67
5.2.1.2	Shun Su Mei.....	69
5.2.1.3	Ocean World.....	71
5.2.1.4	Vehicle Detention Centre.....	72
5.2.1.5	Oriental Golf Course.....	74
5.2.2	Soil index properties from laboratory test.....	77
5.3	Correlations of Seismic Properties with Engineering Index Properties.....	77
5.3.1	Correlation of $V_s$ with SPT N value.....	77
5.3.2	Correlation of $V_s$ with depth for different soils.....	83
5.4	Conclusions.....	89

## Chapter 6 Ground Response Analysis

6.1	Introduction.....	90
6.2	Ground Response Analysis.....	91
6.2.1	Input motions.....	91
6.2.2	Idealized site models.....	105
6.2.3	Moduli and damping factors for dynamic analysis.....	107
6.2.4	Cases for ground response analysis.....	111
6.3	Results of Ground Response Analyses.....	111
6.3.1	Ground response for bedrock acceleration of 0.05g.....	111
6.3.2	Ground response for bedrock acceleration of 0.1g.....	113

6.3.3	Ground response for bedrock acceleration of 0.3g.....	116
6.3.4	Ground response for bedrock acceleration of 0.5g.....	118
6.3.5	Ground response for bedrock acceleration of 0.7g.....	120
6.3.6	Ground response for different geological profiles.....	122
6.3.7	Amplification Factor for Local Site Conditions.....	127
6.4	Comparison of Ground Response Spectra with Chinese Code.....	129
6.5	Proposed Site-Dependent Response Spectra for Seismic-Resistant Design.....	131

## **Chapter 7 Summary and Conclusions**

7.1	Summary.....	135
7.2	Conclusions.....	137
7.3	Recommendation for Future Research.....	138
