ABSTRACT

This thesis work is about the research of reconfigurable microstrip antenna for the partial discharge (PD) detection application. Detection of PD via UHF emission characterization at 500 MHz is an effective diagnostic tool for monitoring high voltage systems so as to predict the failure. Therefore, dual-band antenna with tunable 2nd operating band for simultaneous PD's UHF emission detection and multi-band communications is needed. To accomplish this objective, frequency tuning techniques of antennas are reviewed with the emphasis on the use of defected grounded structure (DGS) and active elements on microstrip monopole antenna. An active dual-band microstrip monopole antenna is presented using varactor loaded DGS with Islands (DGSI) on feedline. This antenna's 2nd operating frequency is tuned from 2.156 GHz to 2.78 GHz when varactor is biased with 5 V to 29 V DC respectively. Moreover, 10-dB matching bandwidth of 62 MHz (28.6%) and 64 MHz (23.0%) are recorded under the above bias conditions. For the sake of completeness of tuning element study, this thesis investigates on DGS stub-loaded structure which offers flexibility in frequency tuning while overall good impedance matching performance is kept. To this end, a novel microstrip monopole antenna using above DGS stub-loaded structure is implemented. Frequency tuning is achieved through the uses of MEMS switches so as to control the slot length of DGS. The prototype MEMS switched antenna reports 27% frequency tuning range from 0.91 GHz to 1.19 GHz for the 2nd operating frequency while the 1st operating frequency is kept unchanged at 0.49 GHz and -18.5 dB matching. Moreover, the bandwidth of 2nd operating band is changed from 382 MHz to 120 MHz for the same MEMS switches control status. The antenna's measurement results agree with the simulations and fulfill the needs of the prototype PD detection.

TABLE OF CONTENTS

Abstract.....	ii
Acknowledgement	iii
Table of Contents	iv
List of Figures.....	vii
List of Tables.....	xii
List of Abbreviations.....	xiii
Chapter 1 Introduction.....	1
1.1 UHF Emission in Partial Discharge	3
1.2 Reconfigurable Antenna for Partial Discharge Detection	5
1.3 Thesis Organization	6
1.4 Thesis Significance and Originalities	6
1.5 References	8
Chapter 2 Microstrip Antenna Using Defected Ground Structure.....	9
2.1 Basics of the Microstrip Antenna	9
2.1.1 Feeding Techniques for Microstrip Antenna	10
2.1.2 The Microstrip Patch Antenna	11
2.1.3 The Microstrip Monopole Antenna	13
2.1.4 1 GHz Microstrip-Fed Square Monopole Design	14
2.2 Basics of Defected Ground Structure	16
2.2.1 Slotline	16
2.2.2 Electromagnetic Band Gap (EBG) Structure	18
2.2.3 Defected Ground Structure	19
2.2.4 Equivalent Circuit Model of Defected Ground Structure Unit	20
2.3 Applications of the Defected Ground Structure	21
2.3.1 Spurious Suppressed Microstrip Dual-Mode Bandpass Filter Using Double U-Shaped DGS	22
2.3.2 Application of Defected Ground Structure to Bandwidth Enhancement of Monopole Antenna	24
2.4 Summary	28
2.5 References	29

Chapter 3	Tunable Microstrip Monopole Antenna.....	31
3.1	Methodology of Frequency Tuning Technique	33
3.1.1	Mechanically Tuning	33
3.1.2	Electronically Tuning	36
	a) Varactor tuned antennas	
	b) PIN diode tuned antennas	
	c) MEMS Switch tuned antennas	
3.2	Parametric Analysis of Microstrip Monopole Antenna	45
3.2.1	Analysis of the Radiation Patch	46
3.2.2	Analysis of the Finite Ground Plane	48
3.2.3	Analysis of the Antenna Feedline	50
3.3	Reconfigurable Element Using Defected Ground Structure	51
3.3.1	Length Variation of U-Shaped DGS	54
3.3.2	Width Variation of U-Shaped DGS	54
3.3.3	Length Variation of Islands	55
3.3.4	Width Variation of Islands	56
3.3.5	Tunable Bandstop Element Using Capacitive Loaded Double U-Shaped DGS	56
3.4	A Tunable Monopole Antenna Using Double U-Shaped Defected Ground Structure with Island	58
3.5	Summary	61
3.6	References	62
Chapter 4	Tunable Dual-Band Antenna Using DGS Stub Loaded Structure	65
4.1	Characteristic of Stub Loaded Structure	65
4.2	DGS Stub Loaded Structure	70
4.3	DGS Tunable Dual Band Monopole Antenna	73
4.3.1	Simulations of Tunable DGS Stub-Loaded Antenna with Different DGS Slot Lengths	74
4.3.2	Measurement Results of Tunable DGS Stub-Loaded Antenna	78
4.4	Summary	82
4.5	References	84
Chapter 5	Conclusions and Future Works	85
5.1	Summary of the Thesis	85
5.2	Future Works	86
5.3	References	88

Appendix A Rogers RO4003.....	89
Appendix B Infineon BB833 Varactor	94
Appendix C Radant Rmsw101 SPST RF-Mems Switch.....	97
