Kit-Ian Kou

Department of Mathematics

University of Macau

## Abstract

In terms of this influential but rarely discussed theory, this thesis seeks to explore and generalize the linear canonical transform (LCT) to quaternion-valued signals. we call it the quaternionic linear canonical transform (QLCT).

In a communication theory setting, an uncertainty principle states that a signal cannot be arbitrarily confined in both the spatial and frequency domains. Many efforts have been devoted to extend the uncertainty principle to various types of functions and Linear canonical transforms. We establish an uncertainty principle for the QLCT by using the properties of the LCT and describe a lower bound on the product of the effective widths of quaternion-valued signals in the spatial and frequency domains by applying the uncertainty principle established in the first part, pointing out that only a Gaussian quaternionic signal can minimize the uncertainty.

One of the basic problems encountered in signal representations using the conventional LCT is the ineffectiveness of the LCT kernel to represent and compute location information. One method to overcome such a problem is the windowed Linear canonical transform (WLCT). Following this method we define windowed quaternionic linear canonical transform(WLCT). The QWLCT has the similar properties with QLCT. Finally we established uncertainty principle of QWLCT.

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Quaternion Algebra</b>	<b>4</b>
<b>3</b>	<b>Linear canonical transform of 2D quaternionic signals</b>	<b>8</b>
3.1	LCTs of 2D quaternionic signals . . . . .	8
3.1.1	Definition . . . . .	9
3.1.2	Properties . . . . .	10
3.2	QLCTs of 2D quaternionic signals . . . . .	17
3.2.1	Definition . . . . .	17
3.2.2	Properties . . . . .	21
3.3	Uncertainty principles for QLCTs . . . . .	26
<b>4</b>	<b>Quaternion window linear canonical transform of 2D quaternionic signals</b>	<b>37</b>

4.1	QWLCT of 2D quaternionic signals . . . . .	37
4.1.1	Definition of the QWLCT . . . . .	37
4.1.2	Examples of the QWLCT . . . . .	38
4.1.3	Properties of QWLCT . . . . .	41
4.2	Heisenberg's uncertainty principle for the QWLCT . . . . .	45
5	Conclusion	48
	Bibliography	49

## ACKNOWLEDGEMENTS

First and foremost, I wish to express my sincerest and deepest gratitude to my supervisor, Dr. Kit-Ian KOU, for her support and inspiring guidance throughout my master's study. I thank her for showing me the beauty of mathematic analysis, teaching me the art of writing research papers, for her support on many research-related matters and her encouraging advice on my research.

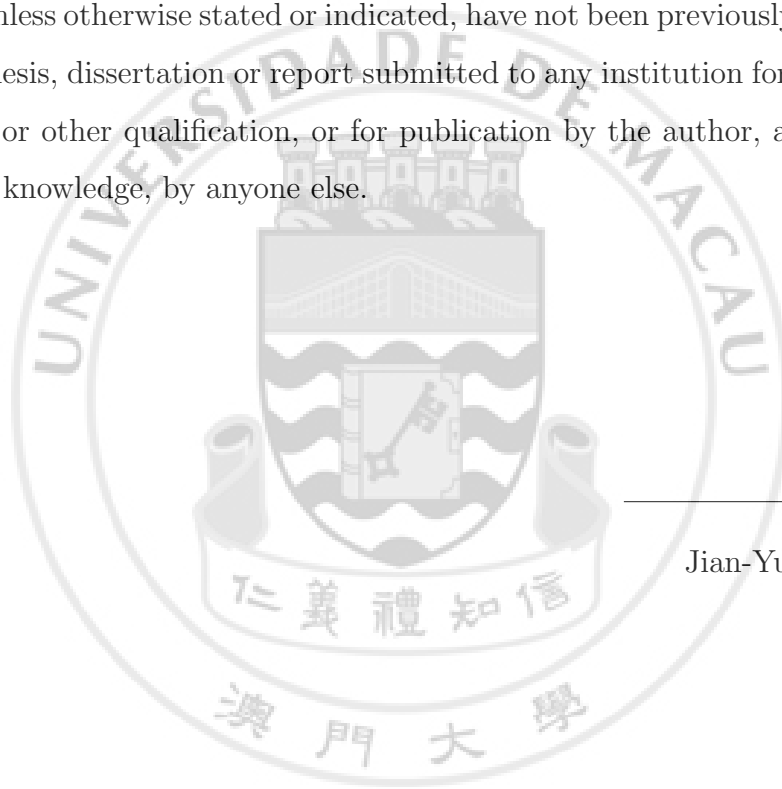

I would also deeply acknowledge other professors during my master's study, including Prof. Tao QIAN, Prof. Xiao-Qing JIN, Prof. Deng DING, Prof. Hai-Wei SUN, Prof. Seak-Weng VONG, Dr. Siu-Long LEI, Prof. Huai-Dong CAO, Prof. Sik-Chung TAM etc. I had really benefited quite a lot from their classes and out-class-communication with them.

I want to give my warmest thanks to my dear friends, officemates and colleagues, for all the helps they gived to me: Mr. Wei-Xiong MAI, Ms. Zhu-Lin LIU, Ms. Yan MO, Ms. Wen-Yan JIA, Ms. Hai-Lin Zhao, Mr. Pan-Qiu XIA, Mr. Le-Ping LIANG, Ms. Shu-Lin LV, Ms. Yuan GAO, Mr. Zhi-Bo WANG, Mr. Jian-Hao LV, Mr. Ze-Zhen CAO, etc.

Last but not least, my heartfelt thanks are dedicated to my parents.

## DECLARATION

The author declares that this thesis represents her own work with Dr. Kit-Ian Kou, the author's supervisor. All the work is done under the supervision of Dr. Kit-Ian Kou during the period 2011-2013 for the degree of Master of Science in Mathematics at the University of Macau. The results in this thesis, unless otherwise stated or indicated, have not been previously included in any thesis, dissertation or report submitted to any institution for a degree, diploma or other qualification, or for publication by the author, and to the author's knowledge, by anyone else.
